Year-End Investment Planning Is More Challenging in 2010

If you don't normally review your investments at the end of each year, 2010 might be a good time to start. And if year-end investment planning is already part of your routine, you might want to pay special attention this year. Why? Because significant changes in the tax code that are scheduled to go into effect in 2011 could substantially alter the taxation of your portfolio next year. That could in turn affect your investment strategy. And since many expect additional changes that will affect next year's tax landscape, it's even more important than usual to think about whether your portfolio needs fine-tuning.

Begin planning before December 31

If you plan to sell a profitable investment at some point, you'll want to assess whether you should sell before the end of the year. That's especially true if you're in a low tax bracket or you have investments that have appreciated substantially. Investors in the 10% and 15% tax brackets currently owe no capital gains taxes on long-term capital gains. That is scheduled to change in 2011, when the long-term capital gains rate at this level is scheduled to increase from 0 to 10%. If you're in the 25% bracket or higher this year, you'll also need to think about this issue, though the scheduled increase from the current 15% to 20% isn't quite as dramatic as the leap from 0 to 10% that those in the lower income brackets will face. (Special, slightly lower rates for investments held for more than five years will apply beginning in 2011.)

Also, the tax brackets themselves are scheduled to change next year (see sidebar). If you plan to harvest a tax loss and think you may be in a higher tax bracket next year, it might make sense to first determine whether the loss would be more valuable later. Though tax considerations shouldn't be the sole factor in a decision to buy or sell, they shouldn't be ignored, either--especially this year.

Complicating your decisions, of course, is the uncertainty about whether the scheduled changes will undergo further revision before the end of the year. One possibility is to have a game plan based on the current scenario, and adjust it as warranted. It may seem like a burden, but for those in higher tax brackets, the extra effort could pay off come tax time.

Think about your overall tax burden

If you converted an IRA to a Roth IRA this year or are thinking about doing so before the end of the year, you may need to take that into account when deciding whether to book capital gains in 2010. That's because you're able to report the taxable ordinary income from the conversion on either your 2010 return or in the 2011 and 2012 tax years (half of the income in each year). Your decision about when you will account for the taxable income that results from a Roth conversion may affect your decision about the timing of investment sales, or vice versa. If you choose to report the income resulting from your Roth conversion on your 2010 return, consider whether it makes sense to realize sizable capital gains this year. If you feel it's to your advantage to sell assets and pay the capital gains tax in 2010, you may want to consider opting to postpone payment of the taxes owed on the Roth conversion until 2011 and 2012. That would mean the total taxes owed would be spread over three years rather than one (though as noted above, your future tax bracket also should be factored into the calculation).

Consider the tax status of dividends

Qualifying dividends are scheduled once again to be taxed next year as ordinary income, as they were before 2003, rather than at long-term capital gains rates, which are typically lower. If you'll be in the 15% tax bracket, that represents an increase of 15%.

And if you'll be in the 28% tax bracket or higher next year, the change in the tax status of dividend payments could also have an impact; the higher your tax bracket in 2011, the greater the impact.

Don't forget the usual suspects

In addition to staying on top of the tax issues that complicate this year's investment planning efforts, there are some tasks that are useful every year. A portfolio review can tell you whether it's time to adjust your holdings to maintain an appropriate asset allocation. Also, if you have losses, you may be able to harvest those losing positions to offset some or all of any capital gains. Be sure to consider how long you've owned the asset; assets held a year or less generate short-term capital gains and are taxed as ordinary income.

If you're selling an investment but intend to repurchase it later, be careful not to buy within 30 days before or after a sale of the same security. Doing so would constitute a violation of the "wash sale" rule, and the tax loss would be disallowed. Finally, if you're considering the purchase of a mutual fund outside of a tax-advantaged account, find out when the fund will distribute dividends or capital gains, and consider postponing action until after that date to avoid owing tax on that distribution.

Ask the Experts: What does a stronger dollar mean for my portfolio?

In the summer of 2008, investors were watching the dollar shrink. Because interest rates here were still relatively low, investors favored riskier investments that offered higher returns. The euro's value climbed to a record of almost $1.60 at one point. But with autumn came the crisis that shook the global financial system. Panicked investors suddenly decided that dollar-denominated assets such as U.S. Treasury bonds didn't look so wimpy after all. Within three months, a euro was worth 30 cents less. Worries about the European debt crisis and whether the euro would even survive as a currency has kept the dollar at roughly the same level or better for much of 2010.

What does that mean for your portfolio? The most obvious impact of a stronger dollar is on the value of overseas investments; the value of holdings denominated in a foreign currency will fluctuate with the exchange rate between that currency and the dollar. Some mutual funds that invest overseas attempt to hedge their currency exposure, using currency futures and other derivatives to try to limit the impact of that fluctuation on the fund's value. Others do not, hoping that any dollar weakness will increase the fund's value for U.S. investors.

Before investing in an international fund, check its prospectus, which is available from the fund. In addition to carefully considering its investment objectives, risks, fees, and expenses, don't forget the special risks of global investments, including political risks, currency risks, and different accounting standards; all of these can vary considerably by country and region. Also, find out whether the fund is hedged or unhedged. A falling dollar can enhance the returns of an unhedged fund, but the lack of a hedge leaves it unprotected if the dollar strengthens.

A stronger dollar can affect your portfolio even if you don't think you own any foreign investments. Many U.S.-based multinationals get a substantial percentage of their revenues overseas. A stronger dollar can cut into those revenues as U.S. exports become more expensive for overseas consumers. Also, many broad-based mutual funds include a percentage of overseas holdings among their assets.
